Hiring Manager
Bangalore, India

Dear Hiring Manager,

I am writing to express my interest in the Data Analyst position at your organization. I recently completed my B.Tech in Data Science and Artificial Intelligence from IIIT Dharwad and have developed strong foundational skills in data analysis, visualization, and machine learning through academic and project-based experience.

I have hands-on experience working with Excel, Power BI, Python, SQL, and machine learning libraries such as Pandas, NumPy, and Scikit-learn. During my projects, I built interactive dashboards, cleaned and transformed datasets, and developed predictive models to generate actionable insights.

One of my key projects involved creating a Sales Performance Dashboard using Power BI, where I analyzed sales trends across multiple cities and product lines using DAX measures and Power Query transformations. I also developed a Medical Insurance Charges Prediction model using regression techniques, achieving strong predictive performance through feature engineering and model optimization.

I am particularly interested in applying my analytical and problem-solving skills in a real-world business environment. I am a quick learner, adaptable, and eager to contribute to data-driven decision-making within your team.

I would welcome the opportunity to discuss how my skills and enthusiasm align with your organization's goals. Thank you for considering my application. I look forward to hearing from you.

Sincerely,

Chandana R
